 Perennial

 1st planting Early April roots & beans

 2nd planting Late April 2nd rotations and leafy vegs.

 3rd planting Early May 3rd rotation and 2nd rot. leafy vegs.

Much leaf eating. Using dried blood against mammals. Slugs are impervious to slug killer. Killing physically when spotted.

 Perennial

 1st planting Early April roots & beans

 2nd planting Late April 2nd rotations and leafy vegs.

 3rd planting Early May 3rd rotation and 2nd rot. leafy vegs.

Manure worked in all beds

Not as much leaf eating. Using dried blood against mammals.

Slug killer and rotenone seems to work better on slugs

Dried blood seems to attract insects and slugs.

Rotenone, MVP and Pyola, plus fabric worked well to protect shoots.

Overall, manure, organic pesticides, and fabric made this years harvest much more reliable. Everything came up.

Perennial

1st planting Early April roots & beans

2nd planting Mid April 2nd rotations and leafy vegs.

3rd planting Late April 3rd rotation and 2nd rot. leafy vegs.

2001 notes:

Manure worked in all beds
Not as much leaf eating. Using dried blood against mammals.
Slug killer and rotenone seems to work better on slugs
Dried blood seems to attract insects and slugs.
Rotenone, MVP and Pyola, plus fabric worked well to protect shoots.

Overall, manure, organic pesticides, and fabric made this years harvest much more reliable. Everything came up.

2002 notes:

Pre-season planting of seeds in vermiculite on 3/4 placed in jiffy greenhouse trays worked well for germination and will hopefully allow larger sprouts to be planted (less bug/slug damage to young shoots).
Most Pinetree garden leftover seeds worked well, but some of the peas and beans were reluctant to germinate and none of the carrots worked at all. The Burpee carrots came up better.

 Perennial

 1st planting Early April roots & beans

 2nd planting Mid April 2nd rotations and leafy vegs.

 3rd planting Late April 3rd rotation and 2nd rot. leafy vegs.

2004 notes:
Manure worked in all beds
Almost no slug or insect problems. Some use of Rotenone. Fabric cover worked well for young seedlings.

Very good rain this year. Almost no watering this year at all. Only a few applications of Miracle Gro needed. Great growth

Overall, manure, organic pesticides, and fabric made this years harvest much more reliable. Everything came up.
